MEDICAL ANTHROPOLOGY SEMINAR

LEARNING-OUTCOME-BASED SUBJECT DESCRIPTION

Program:	Medicine
Course:	Medical Anthropology seminar – AOK-OAK081
Type of subject:	compulsory
Academic year and semester:	Year II. / Spring semester
Course coordinator:	Bettina F. Pikó M.D., Ph.D., D.Sc. – full professor Department of Behavioral Sciences (6722 Szeged Mars square 20.) e-mail: fuzne.piko.bettina@med.u-szeged.hu
Type of class:	seminar
Weekly hours:	1
Credit vale:	1
Type of examination:	evaluation (5)
Preliminary requirements:	Introduction to Medicine – AOK- KUA391/392; AOK-OAK041/042

Purpose of course:

The main purpose of the course is to give an outline of the medical and clinical application of cultural anthropology. Medical anthropology aims to demonstrate a systematic study of human nature, the cross-cultural similarities and differences of health, illness and healing.

The students should:

- Develop familiarity with the importance of lay beliefs of health, disease risks and illness in the process of health care
- Develop an understanding of the cultural characteristics of pain behavior, sexual and reproductive behavior
- Develop an understanding of the cultural aspects of death and dying
- Develop familiarity with the role of cultural stress in health and disease and the mechanisms of stress-related disease

Outcome requirements:

Knowledge

- Getting acquainted with the role of cultural factors in disease development in conjunction with physiological processes (such as pain, stress or nutrition)
- Getting acquainted with the cultural roots of communication problems arising during medical care

Competences

- Being competent in recognizing the cultural characteristics when obtaining medical history
- Being competent in effectively managing health care in altering cultural settings and exploring the cultural origins behind noncompliance

Attitudes

- Giving advice based on the etiological factors taking cultural aspects into account
- Providing health care for patients regardless their ethnicity or cultural identity

- Communicating effectively with emotional intelligence and empathy both personally and on the phone even by means of a translator

Autonomy and responsibility

- Working effectively in exploring cultural background of disease and applying this in clinical decision making
- Working with responsibility in health care system
- Providing secure health care for patients in diverse cultural settings
- Helping with effective clinical decision making

Topics:

1. Introduction to cultural and medical anthropology
2. Medical anthropology of body image and nutrition
3. Medical anthropology of stress and stress-related disease
4. Medical anthropology of pain, sexuality and gynecology
5. Cultural aspects of health care
6. Medical anthropology of death and dying

Methods:

- Practice
- Team-work

Criteria of the competition of the course:

- Participation at the seminars as per the general regulations.
- One absence is permitted from the seminars. More than one absence is allowed only upon valid medical proof.
- Oral presentation of a selected paper (given by the tutor) which should be uploaded by one day before the presentation (ppt) on Coospace.
- Giving a detailed feedback on a classmate's presentation.

Evaluation:

- Oral presentation of a selected paper. (given by the tutor)
- Giving a detailed feedback on a classmate's presentation.
- Requirements of evaluation of the learning outcomes: 70% quality of the oral presentation; 10% class attendance; 20% active and fruitful participation in discussions.

Mandatory reading list:

- Handouts and papers for oral representation
- Cecil G. Helman: *Culture, health and illness*. Butterworth-Heinemann, Woburn, MA., 2007. ISBN: 9780340914502
